INTRODUCTION

In the past ten years the Collections Management Group of the Canadian Parks Service (CPS) has developed a number of tools that are used, in various ways, for documenting and managing collections. Several dozen documents written since 1980 have focussed on disseminating our analysis and research results in order to better manage our artifact collections on display or used for animation in our parks and historic sites. There are numerous types of these documents, such as:

- exhibition catalogues;
- descriptive catalogues;
- statements of collection projects;
- period animation guides;
- period furnishing plans;
- management policies and directives;
- management reports;
- inventories of historical artifacts;
- Artifact Information System (AIS);
- Classification system for historical collections (nomenclature).

The CPS classification system has revolutionized artifact management in recent years. This system's nomenclature makes it possible to categorize all of the artifacts in our historical collections on the basis of a thesaurus of over 6,000 keywords drawn from our cataloguing records. It uses as its basic reference the classification system developed by R.G. Chenhall, *Nomenclature for Museum Cataloging*. Being a second-generation tool, with all of the advantages that entails in comparison to other existing tools, the CPS classification system is more than a theoretical instrument. It is the foundation of our automated collections management system. Its performance currently compares extremely favourably with that of other systems currently in use in the Canadian museum community. In our 114 historic sites, 5 regional offices, and headquarters in Ottawa, the effectiveness of our computerized system more than met the expectations established at the beginning of the decade.

Unlike many other users of automated systems in museum facilities who have experienced difficulty adapting to new technology (some have even gone back to manual card files), our collections managers, curators, and other users employ this system not only as a quick reference tool, but also to research, select, analyse, and locate artifacts. Our computerized records (Artifact Information System) provide access to over 500,000 artifacts on display or in storage throughout the country, and this data bank may be consulted simultaneously from any point in the network. Users may also access other information associated with specific themes or the function of an artifact, thereby facilitating and considerably speeding research into our collections.

In response to the many requests for consultation and the positive comments we received from various museums and universities, we decided to produce a reference edition, *Canadian Parks Service Classification System for Historical Collections*.

In establishing our system, we drew up a list of terms (see THESAURUS), which of course raised the problem of standardizing the vocabulary. Moreover, having to translate terms into French or English forced us to study definitions in depth in order to grasp nuances and choose the most appropriate term. The terms were selected by group consensus.

This list of terms is not immutable. Comparing the present updated list with the initial list that launched the system three years ago indicates that adjustments have already been undertaken within CPS.

Partners from museums are currently working to automate management of their collections, using this the-

saurus as a reference. Their comments will, we hope, enable us to design together a version that meets all users' needs. We now have at our disposal a key tool that would allow all museums with collections of ethnographic artifacts to manage these collections effectively and facilitate museum-to-museum communications.

The next step will be to add illustrations and definitions for each term in the Thesaurus. This *Visual Dictionary* will constitute a complete scientific tool for identifying artifacts and managing historical collections. Once completed, this project will provide museums across Canada and researchers in the material culture field with an original and exceptional scientific tool.

BONNET, MILITARY C080:03-00062 BONNET ÉCOSSAIS MILITAIRE

Headdress with high crown made of plumes and with a diced edged headband.

Part of the uniform in military Scottish corps.

Haute coiffure de plumes, à bandeau quadrillé.

Partie de l'uniforme dans les corps militaires écossais.

CAP C080:03-00063 CASQUETTE

Headgear with soft crown, brimless, sometimes with a visor and flaps to protect the head, the ears and forehead, made of different material (felt, fur, cloth).

Protects the head from the elements.

Synonym:

Windsor cap; frontiersman's cap.

Exclusion:

All other specific CAPs; CAP (H120:09-00115); GLENGARRY (C080:03-00072).

Coiffure souple, sans rebord, faite de matériaux divers (feutre, fourrure, tissu), garnie d'une visière et parfois de rabats protégeant la nuque, les oreilles et le front.

Protège la tête des intempéries.

Exclusion:

KÉPI, CASQUETTE (H120:09-00115); GLENGARRY (C080:03-00072).

CLOG C060:03-00031 GALOCHE

Footwear with thick wooden sole or iron skate and leather or fabric vamp fastened over a shoe or foot.

Protects the shoe or the foot by raising it over the mud.

Synonym:

Patten.

Exclusion:

SABOT (C080:03-00038).

Chaussure à semelle de bois épaisse ou de fer en forme de patin et à empeignes de gros cuir ou de tissu se portant sur un soulier ou directement sur le pied.

Protège le soulier ou le pied en le haussant au-dessus de la boue.

Synonyme:

Socque.

Exclusion:

SABOT (C080:03-00038).

ACKNOWLEDGEMENTS

This project started in 1989 and is the result of the combined efforts of Canadian Parks Service curators and registrars, linguists, translators from Secretary of State, and members of the scientific community. It is in this collegial spirit that the working group was established:

Rosemary Campbell
National Collections Manager
Paul-Aimé Lacroix
Registrar of Collections
Yves Bergeron
Curator from 1987 to 1991
Glen Purdy
Senior Cataloguer
Jean-Luc Vincent
Special Project Assistant
Élaine Bouchard
Project Assistant
Yvon Legendre
Project Assistant

Extended Working Group from:
Atlantic Region
Prairie and Northern Region
Ontario Region
Western Region

Partners in the scientific community*:

Yves Bergeron
Chief Curator
Musée du Séminaire de Québec

Annie Brisset
Director
School of Translators and Interpreters
University of Ottawa

Anne-Marie Desdouits

THE CANADIAN PARKS SERVICE

CLASSIFICATION SYSTEM

FOR HISTORICAL COLLECTIONS

A SCIENTIFIC TOOL FOR COLLECTIONS MANAGEMENT

To date, the national collection of the Canadian Parks Service has an inventory of almost 500,000 artifacts. Apart from the size of the collection, the diversity of the artifacts should be emphasized. In order to adequately manage this large national collection containing artifacts from all sectors of traditional material life it was necessary to adopt a fairly extensive classification system and to ensure standardization of terms.

Few specialized and standardized tools for identifying artifacts existed until the end of the 1970s. Often curators and registrars were the only ones who truly knew their collections, and artifacts were recorded in files under whatever specific name the curator happened to choose.

In 1979 CPS started to use and promote Robert G. Chenhall's classification system. Then, in 1983, upon the registrars' recommendations, CPS officially adopted Chenhall's work as the prime reference for classifying historical artifacts in the national collection.

Given the extent of its network of sites and the diversity of its historical collections, CPS developed the Canadian Parks Service Classification System for Historical Collections, upon which the automated management of historical artifacts is based. Its nomenclature differs from Chenhall's in several respects. Although it contains the same categories, it specifically reflects the CPS national collection and contains only the names of artifacts in that collection. Accordingly, some components of this classification system are more elaborate than their equivalents in Chenhall, e.g., military artifacts, costumes, and packaging and containers.

THE CLASSIFICATION SYSTEM AND THE COMPUTERIZATION OF COLLECTIONS

In 1980 a number of sites in the Canadian Parks Service began automating their collections of historical artifacts. Without any real coordination, these individual initiatives were undertaken to improve access to documentation and enhance the effectiveness of collections management. In 1985, for example, Quebec Region, with the assistance of the Université de Sherbrooke, developed a computer program to manage its collections; Prairie and Northern Region as well as Western region, meanwhile, began to develop a computerized collections inventory system for internal management purposes, and a short time later, CPS studied the feasibility of establishing one common system for the entire network.

The Canadian Parks Service developed the Artifact Information System (AIS), a computerized system specifically adapted to the needs of the Parks network. It proved highly effective. This flexible and open system provides rapid access to the entire national collection. It contains technical data, broken down into about 20 fields, that are essential to collections management:

- Major Category
- Classification
- Nomenclature Code
- Object Name
- Suffix
- Common Name and Description

- Registration Number
- Batch Number

- Acquisition Date
- Method of Acquisition
- Region of Acquisition
- Unit Cost
- Cost of Acquisition

- Status
- Period

- Special Condition
- Condition Code
- Conservation Flag

- Location
  - Building
  - Room
  - Section
  - Location Date

More-detailed information that cannot be expressed as readily in computer language, such as exhaustive descriptions, legal documents, and photographs, are kept in a card file.

During 1986 we started transferring data from card files to AIS. This automation has made it possible to prepare an exhaustive inventory of the entire CPS collection, both on display and in storage. AIS facilitates collections management and above all simplifies research.

The cornerstone of any classification system, the standardization of terms, is particularly important in automating collections management. One curator may identify a given cast-iron vessel as a "pan," a colleague records a similar artifact as a "pot," a third calls it a "cauldron," and a fourth a "baking dish"; in the end, none is incorrect. Individuals name and describe artifacts on the basis of their own empirical and scientific knowledge. When it comes time to conduct research using card files, it soon becomes clear that a single artifact appears under different names and in different categories. The same problems occur with computerized catalogues. As long as each card contains a photograph of the artifact and the collection does not grow much

Thanks to AIS, very little time was required to locate and assemble the artifacts in the above photograph, prepared for an exhibition catalogue for *Montréal et le Québec au temps de la révolution française* [Montréal and Québec during the French revolutionary period].
000/INF/PR6/A-92

beyond a few thousand artifacts, researchers can generally find their way.

But for vast collections held in several locations, system users had to learn to speak the same language, and a list of preferred terms was needed to link artifacts and to conduct research. CPS has been engaged in preparing this list since 1983.

Robert G. Chenhall, in the first edition of *Nomenclature*, warned his readers:

> *No book, no list of terms, no written words, can ever do the actual job of identifying any object. The process of identification, per se, is one of the key functions implied by the job title 'Curator.'**

Chenhall's classification system also conveyed a new idea: establishing for material culture collections preferred terms similar to those used for scientific collections. This would solve problems arising out of the automation of collection records and make possible information exchanges between museums.

CPS faced problems in standardizing terms and coping with English and French terms. The English-language terminology was based on the list Chenhall published in 1978. Quebec Region was charged with the responsibility of preparing a verified list of French terms while respecting the parameters of Chenhall's work.

To rationalize communications between the various regions of the network and to ensure that the same terms are used in French and in English, Rosemary Campbell of Program Headquarters in Ottawa was given responsibility for coordinating this work, and the successful operation of the system depends on this fundamental task. Hence one single person is responsible for noting new terms and disseminating conventions to AIS users.†

After the initial translation phase, we used alphanumeric coding as a bridge between artifacts inventoried in both languages. Artifacts recorded as "CASQUETTE" and "CAP," for example, are identified according to category, class, and object, which are expressed by the same alphanumeric code C080:03-00063 for both. Anyone wishing to identify all the caps in the collection, therefore, may use this code to locate all such headgear regardless of whether their records are in French or English.

Now that the computerization of CPS collections has been completed, a researcher can find out in only a few minutes how many, say, caps are in the network, what condition they are in, where they are stored or displayed, and whether they are available. After querying the data bank, the researcher is certain that he or she has the records for every caulking tool in the collection and is therefore able to make more informed choices than in the past.

* Robert G. Chenhall, *Nomenclature for Museum Cataloging. A System for Classifying Man-Made Objects*, American Association for State and Local History, Nashville, 1978, p. 7.

† Our work led the American Association for State and Local History to invite CPS to participate in its committee to revise Chenhall's nomenclature; the resulting publication benefited from CPS experience:
James R. Blackaby, Patricia Greeno, and The Nomenclature Committee, *The Revised Nomenclature for Museum Cataloguing. A Revised and Expanded Version of Robert G. Chenhall's System for Classifying Man-Made Objects*, AASLH Press, 1988.

MORPHOLOGY OF THE CLASSIFICATION SYSTEM

How is a system for classifying material culture artifacts vital to managing an ethnographic collection? Any collection consists of series of objects, but only a classification system makes it possible to establish a primary level of organization and analysis. Such a system becomes increasingly necessary as a collection develops.

Classification systems simply provide indexing terms; they do not give names to all the artifacts involved. They make it possible to sort artifacts by category and class according to specific perspectives. Strict rules facilitate identifying and locating artifacts and, by extension, managing and controlling them. This approach opens the door to data automation. Classification systems become the key to accessing artifacts.

CPS nomenclature, like Chenhall's, contains a hierarchical structure established according to each artifact's primary function. Each of the 500,000 artifacts in the national ethnographic collection has a place in this nomenclature, which has been specifically tailored to CPS needs.

A HIERARCHICAL SYSTEM

In science, classification systems establish hierarchies through direct observation of the physical characteristics of natural things. CPS followed this principle to develop its classification system for historical artifact collections. To create simple and useful divisions, managers of historical collections have established hierarchical levels on the basis of an object's original function.

ORIGINAL FUNCTION OF AN OBJECT

Artifacts of material culture all have one thing in common: they were created for a specific purpose. This is the original function.

As Chenhall wrote,

> *The lexicon in this book is based upon the assumption that every man-made object was originally created to fulfill some function or purpose and, further, that original function is the only common denominator that is present in all of the artifacts of man, however simple or complex. At the top or highest level in any hierarchy of classifying and naming man-made artifacts there can be no consistent organizing principle other than the known (or presumed) reason why each object was originally created.**

An object's primary function must always be taken into account and should not be confused with other possible but subsequent functions. The issue arises because artifacts tend to evolve over time and acquire different functions.†

---

* Robert G. Chenhall, *Nomenclature for Museum Cataloging. A System for Classifying Man-Made Objects*, American Association for State and Local History, Nashville, 1978, p. 8.

† *See* Marcel Moussette, "Sens et contresens: l'étude de la culture matérielle au Québec," in *Canadian Folklore canadien*, Vol. 4, 1-2, 1982, pp. 10-16.

When an artifact has several functions, it is classified in the appropriate main category that comes first in the hierarchical listing. For example, a blacksmith's apron will be classified in CLOTHING, OUTERWEAR and not METALWORKING TOOLS & EQUIPMENT. Similarly, a watercolour picture entitled "Canadian Infantrymen on the March," will be placed in DOCUMENTARY ARTIFACT and not ART.

In some cases, the system makes it possible to classify artifacts according to a function other than the original function:

- an artifact's original function is not known, but its use at the time it was acquired by CPS is known;
- the secondary function takes precedence over the original function. For example, a gun used for trade will be classified in EXCHANGE MEDIUM, not in FIREARM;
- an artifact no longer fulfills the function for which it was created because it has been modified/altered for adaptation to another function. For example, a used tin can (CONTAINER [G020]) that has been modified to serve as an ashtray (HOUSEHOLD ACCESSORY [B080]) will be classified according to its most recent function.

In some specific cases, the system permits one artifact to be included in up to three classes to facilitate research and cover all aspects of the artifact, e.g.,

- a try square bearing the inscription "Pascal Hardware" (WOODWORKING TOOLS & EQUIPMENT and ADVERTISING MEDIUM);
- a sword bearing an inscription commemorating victory in a battle in which the sword was used (ARMAMENT T&E, EDGED and DOCUMENTARY ARTIFACT).

THE ORGANIZATIONAL STRUCTURE

The structure of the nomenclature is organized into three levels:

- categories,
- classes and subclasses, and
- names of objects.

There are ten categories of artifacts:

01: Structures
02: Furnishings
03: Personal Artifacts
04: Tools & Equipment for Materials
05: Tools & Equipment for Science and Technology
06: Tools & Equipment for Communication
07: Distribution and Transportation Artifacts
08: Communication Artifacts
09: Recreational Artifacts
10: Unclassifiable Artifacts

These ten categories could be divided into four groups:

SHELTER

01: Structures
02: Furnishings
03: Personal Artifacts

TOOLS AND EQUIPMENT

04: Tools & Equipment for Materials
05: Tools & Equipment for Science and Technology
06: Tools & Equipment for Communication
07: Distribution and Transportation Artifacts

COMMUNICATION

08: Communication Artifacts
09: Recreational Artifacts

UNKNOWN

10: Unclassifiable Artifacts

Within categories, artifacts are sorted into classes and subclasses, both of which are listed according to alphanumeric codes.

ARTIFACTS THAT ARE DIFFICULT TO IDENTIFY

It is sometimes difficult to identify artifacts correctly. A certain number of possibilities nonetheless exist for recording information in the data base.

For example, an unidentified kind of shovel used in a foundry could be classified as:

SHOVEL and METALWORKING T&E.

An unidentified shovel that cannot be associated with a specific activity could be designated as:

SHOVEL and MUTIPLE USE ARTIFACTS.

In an extreme case, where the artifact is not identified and cannot be associated with an activity, the record would read:

PROBLEMATICAL and FUNCTION UNKNOWN.

ARTIFACTS THAT ARE DIFFICULT TO CLASSIFY

Some artifacts are difficult to classify because they serve more than one purpose. Scout knives, for example, have multiple uses. Other objects are designed to have two uses, such as rulers or ballpoint pens bearing company or retailer names, or clothing emblazoned with a corporate sponsor's name.

Museums often contain artifacts that have been altered to adapt to new functions. Barrels converted into flower boxes are one example of this.

Artifacts that have been transformed intentionally should be classified according to their most recent function. Thus, the converted barrels should be classified in SITE FEATURE.

LIST OF TERMS

In any classification system, it is essential to distinguish between the *names of objects* and the *terms used to describe objects*. Object names include all common names used to designate objects of material culture. Object terms, however, refer back to the preferred words or expressions used in the classification system. Thus, object names such as "cauldron," "pot," "pan," or "casserole dish" all refer in the classification system to a single preferred artifact term: cooking receptacle. Of course, the common names are part of an object's history; they indicate that it is part of material culture. For this reason, common names must be given under a specific heading in the cataloguing record.

Object terms are generally selected by consensus; thus, they may sometimes correspond to a common name. This method does generate a certain ambiguity.

SELECTING AND ADDING TERMS

Object terms used in the CPS Classification system have been approved by a consensus of registrars and curators. The English spelling conforms to *Webster's Third International Dictionary*, while the French spelling is that given in the Robert dictionary.

New object terms must be selected according to the rules of the classification system. They must specify a useful generic distinction, and they must be binominal if at all possible (i.e., a substantive and a single qualifier).

Secondary data such as the style, manufacturer, or era of an artifact cannot be used to create new object terms.

RULES OF WRITING

Wherever possible, categories are identified by terms in the plural, while classification terms and artifact names are usually in the singular.

Categories, classification terms, and object names are always written in capital letters. Lower-case letters are used only in written documentation (registration and worksheet records) and are reserved for the artifact's common name (i.e., names in common use, scientific names, and regionalisms).

RULES OF SYNTAX

The general rule for name entry in the lexicon is to invert it. The noun or substantive of the object term is placed first, followed by a comma, followed by a word or phrase qualifier.

There are a few exceptions to this rule:

- words that make no sense if inverted such as NIDDY NODDY, CHEST OF DRAWERS;
- parts, accessories, and fragments of objects such as LAMP BURNER;
- assemblages such as MORTAR & PESTLE.

DEFINITIONS OF THE CATEGORIES,

CLASSES, AND SUBCLASSES

(Adapted from *Revised Nomenclature*)

Category 01
STRUCTURES

Artifacts originally created to define space for human activities or to be used as components of space-defining artifacts.

A020
BUILDING

An artifact originally created primarily to provide or define a space with a controllable climate, usually through enclosure, for human activities. This classification may include permanent structures, such as garages or office buildings, or portable structures, such as tents. This classification includes most human-made structures. Houses, barns, warehouses, train stations, and jails are all primarily intended to provide spaces that can be kept warm or cool and dry. Architectural samples integral to buildings, such as wall sections or roof sections, should be catalogued in this classification as parts of buildings. Separable, distinct, and interchangeable components, such as doorknobs or window sashes, should be classified as BUILDING COMPONENT (A040). This classification includes interpretive models of buildings.

A040
BUILDING COMPONENT

An artifact originally created as a separate, distinct, and generally interchangeable structural or decorative part of a building (though such artifacts as hinges, for example, can be used on non-building artifacts such as gates or tables). Though building components are distinct objects, they function as parts of larger structures rather than as independent units. This classification includes such things as mantels and window frames, but excludes parts of buildings or other structures that lack distinctiveness or interchangeability, such as roofs, chimneys, or joists. Also excluded from this classification are parts of buildings that are not integral parts of a structure, such as furnishings, lighting devices, and plumbing fixtures, all of which are listed in the FURNISHINGS category.

A060
SITE FEATURE

An artifact originally created as a distinct element that is associated with a site, a building, or other structure. Rather than functioning simply as a part of a larger structure, a site feature is an independent entity that complements other structures. This classification includes such things as birdbaths, flagpoles, gates, and fences.

A080
OTHER STRUCTURE

An artifact originally created primarily to modify the environment or landscape or to define a space for some

reason besides climate control. This classification includes dams, mines, and bridges. Structures such as sports complexes that are primarily intended to provide controlled access and convenient seating should be placed in this classification. Some other structures may have climate-controlled spaces, such as the space under a dome in a stadium or the generating room of a hydro-electric dam, but these spaces serve a secondary role to the function of the structures.

Category 02
FURNISHINGS

Artifacts originally created to facilitate human activity and to meet physical needs of people generally by offering comfort, convenience, or protection. Clothing is excluded from this classification as it addresses only the needs of specific individuals. Furnishings are not artifacts used as active agents in other processes such as tools or equipment; they passively enable human activity.

B020
BEDDING

An artifact originally created to be used on a bed or in association with sleeping, such as blankets, pillows, and sleeping bags.

B040
FLOOR COVERING

An artifact originally created as portable or temporary covering for a building floor. This classification includes rugs and carpeting, but not permanently attached tile or linoleum, which are included in the BUILDING COMPONENT (A040) classification.

B060
FURNITURE

An artifact originally created to answer the physical requirements and comforts of people in their living and work spaces. This classification includes outdoor furniture, desks, tables, beds, and chairs, but excludes appliances or tools such as washing machines or ladders.

B080
HOUSEHOLD ACCESSORY

An artifact originally created to be placed in or around a building for the convenience of people to enchance, complement, or facilitate the maintenance of their environment. This classification includes small furnishings such as soap dishes and spittoons, special household containers such as vases and wastebaskets, and objects, such as antimacassars and table covers, that protect furniture. The classification does not include artifacts intended primarily to communicate, they are classified as ART (H040) in COMMUNICATION ARTIFACTS, nor does it include devices used in productive housekeeping activities such as cooking or maintenance.

B100
LIGHTING DEVICE

An artifact originally created to provide illumination. This classification includes lighting accessories such as candlesnuffers or wick trimmers, general-purpose portable lighting devices such as kerosene lanterns, and specialized fixtures such as streetlamps and theatre lighting devices and lighthouse lamp accessories.

B120
PLUMBING FIXTURE

An artifact originally created to be attached as an integral component to water and sewer lines, often within a building. Portable objects that serve comparable purposes are HOUSEHOLD ACCESSORIES (B080). Pipes and pipe fittings are BUILDING COMPONENTS (A040), not PLUMBING FIXTURES (B120).

B140
TEMPERATURE CONTROL DEVICE

An artifact originally created to enable people to control the temperature of their immediate environment according to their needs. This classification does not include devices to control temperature for purposes other than human comfort, as is the case with bake ovens and kilns, nor does it include relatively permanent structural parts of a building, such as fireplaces or flues.

e.g., stove, woodbin, ember carrier.

B160
WINDOW OR DOOR COVERING

An artifact originally created to cover or adorn a window, door, or doorway. This classification does not include relatively permanent structural parts of buildings that are BUILDING COMPONENTS (A040), such as doors or window sashes.

e.g., curtain, valance, curtain ring.

Category 03
Personal Artifacts

Artifacts originally created to serve an individual's personal needs as clothing, adornment, body protection, or grooming aids.

C020
ADORNMENT

An artifact originally created to be worn on the human body or on clothing for ornamentation rather than for protection or simply as body covering. Adornment lacks the communicative aspect of objects in the PERSONAL SYMBOL (H120) classification and is more decorative than those in the PERSONAL GEAR (C160) classification.

e.g., ring, necklace, pendant.

CLOTHING

An artifact originally created as a covering for the human body. This classification includes underwear, outerwear, headwear, footwear, and accessories such as belts or cuff links.

C060: Clothing Footwear

Clothing and other protective items that are worn on the feet for protection or cover. This classification includes boots, stockings, gaiters.

C080: Clothing, Headwear

Clothing that protects or covers the head. This classification includes bonnets, tricorn hats, and turbans.

C100: Clothing, Outerwear

Clothing that is worn on the body over undergarments or as an exterior layer of dress. This classification includes coats, overcoats, dresses.

C120: Clothing, Underwear

Clothing that is worn beneath outerwear to protect or cover the body. Underwear is the layer of clothing that is closest to the skin. This classification includes petticoats, corsets.

C140: Clothing accessory

An artifact, such as a belt or cuff link, created originally to be used in association with clothing. Accessories include artifacts that are worn, such as ascots, as well as those that are used for minor care of clothing, such as shoe-polish applicators.

C160
PERSONAL GEAR

An artifact originally created to be used by an individual as a personal carrying device such as a wallet or a

knapsack, as a protective apparatus such as an umbrella or goggles, as a personal or physical aid such as a cane or eyeglasses, or as personal smoking equipment and supplies such as a pipe. This classification includes military accoutrements such as canteens and pouches used as personal accessories not directly associated with armament.

C180
TOILET ARTICLE

An artifact originally created to be used for personal care, hygiene, or grooming. This classification includes razors, toothbrushes, cosmetics.

Category 04
TOOLS & EQUIPMENT FOR MATERIALS

Tools, equipment, and supplies originally created to manage, oversee, capture, harvest, or collect resources and to transform or modify particular materials, both raw and processed. These artifacts are normally created in response to problems inherent in the materials themselves. Wood requires certain kinds of cutting devices, fish require certain lures, food requires certain serving utensils.

D020
AGRICULTURAL T&E

Tools, equipment, and supplies originally created for farming or gardening. This classification includes implements used in planting, tending, harvesting, and storing crops and in processing food for animals but not food for humans (*see* FOOD PROCESSING T&E [D100]). This classification does not include tools and equipment used in caring for animals (*see* ANIMAL HUSBANDRY T&E [D040]), working with forest products (*see* FORESTRY T&E [D140]), or in preparing fibres for textiles from agricultural products (*see* TEXTILEWORKING T&E [D300]). Tools and equipment used in tobacco harvesting are found in this classification.

D040
ANIMAL HUSBANDRY T&E

Tools, equipment, and supplies originally created for the care, breeding, and study of animals. This classification includes instruments used in the practice of veterinary medicine, in the psychological study of animals, and in the care of animals, such as the tools a farrier uses to shoe animals. This classification excludes equipment used in processing animal products for human use (*see* FOOD PROCESSING T&E [D100] or LEATHER, HORN, & SHELLWORKING T&E [D180]). Also excluded are the tools of trades related to animal husbandry; these tools are not used directly with animals, such as a farrier's metalworking tools.

e.g., hoof chisel, hobble, muzzle.

D060
FISHING & TRAPPING T&E

Tools, equipment, and supplies originally created for capturing aquatic and terrestrial animals by any means other than weaponry, such as nets, traps, and fishhooks.

FOOD T&E

D100: Food Processing T&E

Tools, equipment, and supplies originally created for processing, storing, and preparing food or beverages for human consumption. This classification does not include tools for gathering, producing, or managing food materials.

e.g., churn, sugar cutter, cheese slicer.

D120: FOOD SERVICE T&E

Tools, equipment, and supplies originally created for the service, presentation, or consumption of food or beverages by humans, such as saucers, cups, and silent butlers.

D140
FORESTRY T&E

Tools, equipment, and supplies originally created for cutting, handling, or processing timber or for harvesting forest crops such as bark, sap, gum, resin, or rubber (bark shredder, felling ax). This classification does not include equipment for cartage, which is classified under TRANSPORTATION ARTIFACTS, or for manufacturing products from wood, which is classified under WOODWORKING T&E (D320) or PAPERMAKING T&E (D280).

D160
GLASS, PLASTICS, & CLAYWORKING T&E

Tools, equipment, and supplies originally created for fabricating objects from homogenous complex compounds, such as glass, clay, rubber, synthetic resins, plastics, or waxes. This classification also includes the tools, equipment, and supplies used for producing such homogenous complex compounds. These compounds differ from other materials because they generally require elaborate processing at some point during their use. As compounds, they differ from other processed materials, such as leather, because they are not discrete units; they differ from aggregate materials, such as masonry, because of their homogeneity and their need for elaborate processing. This classification includes candle molds, glazier points.

D180
LEATHER, HORN, & SHELLWORKING T&E

Tools, equipment, and supplies originally created for processing materials that are animal in origin. This classification includes tools and equipment for processing furs or hides, for preparing leather, for fabricating leather products, for working shell, horn, bone, and ivory, and tools for making things from quills or feathers. This classification also includes artifacts for processing materials that are the products of insects and bacteria.

e.g., beaming knife, awl, harness maker's bench.

D200
MASONRY & STONEWORKING T&E

Tools, equipment, and supplies originally created for working with natural stone or with aggregate materials such as concrete, mortar, brick, or plaster. These aggregate materials can be of natural or manufactured origin. They differ from materials related to GLASS, PLASTICS, & CLAYWORKING T&E (D160) because they lack the homogeneity and the need for complex processing of those materials.

e.g., bushhammer, zax, trowel.

D220
METALWORKING T&E

Tools, equipment, and supplies originally created for casting, forging, machining, or fabricating metals or metal products. This classification does not include tools, equipment, and supplies used in mining or preliminary ore processing (*see* MINING & MINERAL HARVESTING T&E [D240]).

e.g., anvil, sheet metalworker's snips, vise.

D240
MINING & MINERAL HARVESTING T&E

Tools, equipment, and supplies originally created for extracting materials in solid, liquid, or gaseous state from the natural environment. This classification includes equipment used for underground and surface mines, quarries, and oil and water wells, for prospecting, and for supplemental processing operations such as breaking, milling, washing, cleaning, or grading. It also includes tools used for ice and salt harvesting.

e.g., ice saw, spoon, double-pointed pick.

D260
PAINTING T&E

Tools, equipment, and supplies originally created for working with materials that mask large surfaces by depositing a residual film, such as a paint film, or by using adhesives to attach a thin covering, such as wallpaper or gold leaf, to a surface. This classification includes tools, equipment, and supplies used in decorative, artistic, and protective applications. Excluded are tools and equipment that are used with thicker coatings, such as wood veneers or plastic laminates, and tools and equipment used for metal plating. Also excluded are tools and equipment, such as ink knives and silk screens, associated with printing processes.

e.g., putty knife, palette, wallpaper brush.

D280
PAPERMAKING T&E

Tools, equipment, and supplies originally created for manufacturing materials formed from the residue of suspensions or fabricating products made of such materials. Paper, whether made from wood pulp, textile fibres, or plastic fibres, is the principle product that falls in this classification. Particles mixed with liquids form suspensions. Though felt is made of materials that are matted like paper, tools and felting fall under TEXTILEWORKING T&E (D300) because felt is not formed from a suspension.

D300
TEXTILEWORKING T&E

Tools, equipment, and supplies originally created for preparing materials made from fibres and preparing woven fabrics. Also included in this category are tools, equipment, and supplies used for manufacturing objects from fibres or cloth. This classification includes tools, such as hatchels and cotton gins, specific to fibre preparation, but excludes tools, such as sheep shears and cotton balers, that are related to fibre sources.

e.g., sewing needle, embroidery scissors, reel, spool.

D320
WOODWORKING T&E

Tools, equipment, and supplies originally created for fabricating objects from wood. This classification includes artifacts used with and to create physically modified wood by-products such as plywood, chipboard, and masonite. This classification excludes tools and equipment for making objects out of chemically modified wood by-products such as paper, rayon, and rubber.

e.g., clamp, felloe saw, plane.

OTHER T&E FOR MATERIALS

D550: BASKET, BROOM, BRUSH MAKING T&E

Tools, equipment, and supplies for fabricating objects out of fibrous materials that are generally coarser than those used for textiles. This subclass includes tools used for basket making, broom making, brush making, and thatching.

D600: CIGAR MAKING T&E

Tools, equipment, and supplies for fabricating nonfood products for human consumption out of tobacco and related vegetable products. This subclass includes tools for handling harvested tobacco and manufacturing tobacco products. Smoking accessories and supplies are under PERSONAL GEAR (C160).

D650: LAPIDARY T&E

Tools, equipment, and supplies for fabricating objects out of crystalline materials, primarily precious and semi-precious stones. This subclass includes jewellers' gem-cutting tools, but excludes tools that are used in jewellry manufacture but that are for working non-crystalline materials such as metal, wood, or plastic.

D680: SOAPMAKING T&E

Tools, equipment, and supplies, such as a potash caldron or soap stick, used in manufacturing soap from hardwood ash residue.

D700: WIGMAKING T&E

Tools, equipment, and supplies used in fabricating wigs and hair pieces from fibres. This subclass includes tools for preparing and arranging fibres and for sewing wigs, and special tools for finishing wigs. Excluded are tools that might be generally used for grooming, such as combs and brushes, unless they are specifically designed for wigmaking.

Category 05
TOOLS & EQUIPMENT FOR SCIENCE & TECHNOLOGY

Tools, equipment, and supplies used to observe natural phenomena or to apply knowledge gained from such observation. Tools in this category tend to be made to enlarge or record our understanding of the world or to help express such understanding. Classifications in this category are related by virtue of the fact that they contain artifacts created to employ a particular body of knowledge. ASTRONOMICAL T&E (E200) covers tools used to examine distant phenomena. TIMEKEEPING T&E (E540) covers things that people have developed to measure time. MAINTENANCE T&E (E340) covers tools developed in response to a body of knowledge about how to take care of things. These classifications are based on knowledge rather than on materials.

E020
ACOUSTICAL T&E

Tools, equipment, and supplies originally created for studying sound and its effect upon hearing. Artifacts in ACOUSTICAL T&E differ from those in SOUND COMMUNICATION EQUIPMENT (E020) in that the function of the former is to study sound, not to transmit or receive it. They differ from some related items in MEDICAL AND PSYCHOLOGICAL T&E (E380) in that the function of items in ACOUSTICAL T&E is to examine the nature and effects of sound, not to diagnose or treat medical situations.

e.g., tuning fork.

ARMAMENT T&E

Tools, equipment, and supplies originally created to be used for hunting, target shooting, warfare, or self-protection. This classification includes firearms, artillery, bladed weapons, and striking weapons. It does not include objects designed for transporting troops or supplies. For convenience it is divided into several subclasses based on weapon forms.

E060: Armament T&E, Firearm

This subclass includes all projectile-firing weapons than can be easily deployed by one person. It excludes ammunition, firearm accessories, and crew-served heavy armament.

e.g., rifle, pistol, blunderbuss.

E080: Armament T&E, Edged

This subclass includes all armament intended to cut or pierce by cutting. It includes edged weapons such as bayonets that are accessories to firearms and tools such as crossbows that launch edged weapons.

E100: Armament T&E, Bludgeon

This subclass includes all armament designed to batter or crush by weight or momentum. It also includes arms such as sling-shots that propel missiles that are neither explosive nor penetrating.

e.g., blackjack, club.

E120: ARMAMENT T&E, ARTILLERY

This subclass includes all heavy weapons that employ combustion or explosion to fire a projectile. Artillery may be portable and it may be employed by only one person, but typically it is fired by a crew from a more or less stationary position.

e.g., cannon, carronade.

E140: ARMAMENT T&E, AMMUNITION

This subclass includes all ammunition for armament whether intended for particular weapons, such as BBs or cartridges, or intended to be deployed alone, such as missiles or bombs.

E160: ARMAMENT T&E, BODY ARMOR

This subclass includes clothing worn as defensive armament. It includes the formal parts of a "suit of armour" and protective devices used in combat.

E180: ARMAMENT T&E, ACCESSORY

This subclass includes all accessories used for hunting, target shooting, warfare, or self-protection. This subclass includes arms and artillery accessories and personal accoutrements, such as cartridge belts, cartridge boxes, and sword belts, associated with armament.

E200
ASTRONOMICAL T&E

Tools, equipment, and supplies originally created to observe, measure, and document objects and events outside the earth's atmosphere. Artifacts within ASTRONOMICAL T&E differ from those within OPTICAL T&E (E460) in that the former are not intended to address particular problems associated with vision. And they differ from those under SURVEYING AND NAVIGATIONAL T&E (E500) in that they are concerned with observation rather than with practical uses for such observation.

e.g., astrolabe, achromatic telescope, orrery.

E220
BIOLOGICAL T&E

Tools, equipment, and supplies originally created to observe, measure, and document physiological or anatomical aspects of organisms for purposes other than diagnosis or treatment. Tools for diagnosing and treating people are classified under MEDICAL AND PSYCHOLOGICAL T&E (E380); those for animals are under ANIMAL HUSBANDRY T&E (D040).

e.g., petri dish.

E240
CHEMICAL T&E

Tools, equipment, and supplies originally created for studying or manufacturing substances based upon their molecular composition, structure, and properties. The study of atomic and subatomic particles is classified under NUCLEAR PHYSICS T&E (E440); study of the interaction of physical objects, under MECHANICAL T&E (E360).

e.g., flash, beaker, still.

E260
CONSTRUCTION T&E

Tools, equipment, and supplies originally created for moving earth and building structures. This classification includes paving machines and equipment that modifies by demolition, such as wrecking balls and jackhammers. It also includes tools, such as pile drivers, used for constructing highways and structural facilities. It does not include specialized tools, such as hammers or cement mixers, listed in other classifications and used in the construction industries.

E280
ELECTRICAL & MAGNETIC T&E

Tools, equipment, and supplies originally created to observe, measure, and document electrical and magnetic phenomena. This classification also includes tools, equipment, and components, such as electrician's pliers or oscilloscopes, used in the manufacture, installation,

and repair of electrical and electronic devices. It does not include electrical or electronic devices created to serve other specific purposes, such as sound communication or data processing, nor does it include electrical motors or generators (*see* ENERGY PRODUCTION T&E [E300]).

e.g., ammeter, resistor, fuseboard.

E300
ENERGY PRODUCTION T&E

Tools, equipment, and supplies originally created to generate, convert, or distribute energy or power.

e.g., motor, generator.

E320
GEOLOGICAL T&E

Tools, equipment, and supplies originally created to observe, measure, and document geological phenomena. This classification includes geologists' picks and seismic measuring devices, but excludes tools used for harvesting or mining rock or mineral materials.

E340
MAINTENANCE T&E

Tools, equipment, and supplies originally created for cleaning or laundering activities, whether carried on in homes or public buildings, whether performed privately or professionally. This classification includes specialized tools used for restoring and conserving objects.

e.g., clothes wringer, iron, sock stretcher.

E360
MECHANICAL T&E

Tools, equipment, and supplies originally created for the study, measurement, or utilization of the static and dynamic properties of solids, liquids, and gases. This classification includes general-purpose mechanical devices, such as wedges and hoists, and specialized devices, such as tensiometers and pressure gauges, used to measure mechanical properties.

E380
MEDICAL & PSYCHOLOGICAL T&E

Tools, equipment, and supplies originally created for examining, testing, diagnosing, and treating humans. This classification includes dental tools, objects used for testing sight and hearing, and objects used for psychological testing or treatment. It does not include objects used to study physical phenomena (*see* OPTICAL T&E [E460], ACOUSTICAL T&E [E020], BIOLOGICAL T&E [E220], and CHEMICAL T&E [E240]), or tools for veterinary medicine (*see* ANIMAL HUSBANDRY T&E [D040]).

e.g., splint, forceps, dose spoon.

E400
MERCHANDISING T&E

Tools, equipment, and supplies originally created to facilitate or enable the exchange of goods or services. This classification includes artifacts used to present goods, such as counters, as well as specific product packages. General product packages that are primarily intended for transporting goods rather than for marketing them fall within CONTAINERS (G020) in the DISTRIBUTION & TRANSPORTATION ARTIFACTS category.

E420
METEOROLOGICAL T&E

Tools, equipment, and supplies originally created to observe, measure, and document atmospheric phenomena.

e.g., weather vane, barometer.

E440
NUCLEAR PHYSICS T&E

Tools, equipment, and supplies originally created to study atomic structure and elementary particles as well as the physical properties of the universe.

E460
OPTICAL T&E

Tools, equipment, and supplies originally created to observe, measure, and record light. This classification includes commonly used equipment, such as binoculars and microscopes. It excludes specialized artifacts created for other scientific observation, such as visual-acuity charts and telescopes that are used particularly for astronomy (E200).

E480
REGULATIVE & PROTECTIVE T&E

Tools, equipment, and supplies originally created for controlling the behaviour of people, providing security or protection for property, and carrying out non-ceremonial activities of governmental organizations (including fire protection, police protection, and voting).

e.g., handcuffs, whip, shackle.

E500
SURVEYING & NAVIGATIONAL T&E

Tools, equipment, and supplies originally created to determine the position of an observer relative to known reference points or to indicate the form and extent of a region, such as land surface. This classification includes instruments for taking linear and angular measurements. It excludes devices for making calculations (*see* DATA PROCESSING T&E [F020]) or for recording data graphically (*see* DRAFTING T&E [F040]). This classification differs from ASTRONOMICAL T&E (E200) in that the objects in this classification are used for applied purposes, not for scientific study.

e.g., astrolabe, sextant, theodolite.

E520
THERMAL T&E

Tools, equipment, and supplies originally created to observe, measure, and document heat and its effects. Specialized artifacts created to serve specific purposes, such as a meteorological thermometer, are excluded from this classification.

E540
TIMEKEEPING T&E

Tools, equipment, and supplies originally created for recording and measuring time. This classification does not include timekeeping artifacts created for specialized purposes, such as chronometers.

e.g., clock, sundial.

E560
WEIGHTS & MEASURES T&E

Tools, equipment, and supplies originally created to observe, record, and measure mass (weight) or physical dimensions such as length, area, and volume. This classification includes general-purpose measuring devices such as precision balances or folding rules. It excludes artifacts created to measure time and to measure particular scientific data. Also excluded are specialized measuring devices and gauges such as sextants or carpenters' squares.

E600
OTHER T&E FOR SCIENCE & TECHNOLOGY

Category 06
TOOLS & EQUIPMENT FOR COMMUNICATION

Tools, equipment, and supplies used to enable communication. This category includes those classifications for literal and abstract communication, PRINTING T&E (F100) and MUSICAL T&E (F060). This category does not include things produced as communication, such as works of art and documents. These are the artifacts created by the tools of this category, and they are listed in Category 08, COMMUNICATION ARTIFACTS.

F020
DATA PROCESSING T&E

Tools, equipment, and supplies originally created for processing data by manual, mechanical, or electronic means. This classification includes numerical and word-processing devices such as abacuses and digital computers, process-control devices such as analog computers; and learning devices such as teaching machines.

F040
DRAFTING T&E

Tools, equipment, and supplies, such as T-squares or drafting tables, originally created to be used for precision drawing. This classification includes instruments used to record surveying and navigational observations. It does not include general-purpose writing or lettering tools.

F060
MUSICAL T&E

Tools, equipment, and supplies originally created to produce musical sounds. This classification includes devices actively employed in musical performance. It excludes equipment that simply transmits sound, as well as acoustical tools and equipment for studying sound.

e.g., piano, drum, violin.

F080
PHOTOGRAPHIC T&E

Tools, equipment, and supplies, such as cameras, film-processing tanks, or enlargers, originally created to capture permanent visual images by optical and chemical means.

F100
PRINTING T&E

Tools, equipment, and supplies originally created to reproduce written, photographic, or artistic material. This classification includes specialized tools such as

handpresses, engraver's blocks, and photocopiers that are used for bookbinding, engraving, etching, lithography, and silk-screening.

F120
SOUND COMMUNICATION T&E

Tools, equipment, and supplies originally created to amplify or store music, spoken words, or other sounds that are meaningful for human communication.

e.g., foghorn, megaphone, speaking tube.

F140
TELECOMMUNICATION T&E

Tools, equipment, and supplies originally created to facilitate communicating at a distance, usually by means of electronic equipment. This classification includes the telephone, telegraph, radio, and television.

F160
VISUAL COMMUNICATION T&E

Tools, equipment, and supplies originally created to be used as visual signs or signalling devices or as means of viewing photographic or other visual images.

e.g., railroad lantern, signal flag, motion-picture projector.

F180
WRITTEN COMMUNICATION T&E

Tools, equipment, and supplies originally created to facilitate communication between people by means of written documents. This classification includes tools and supplies used for writing, such as pens, ink, and paper. Excluded are artifacts produced by writing, such as letters, and artifacts that are written upon but that were created for another purpose, such as postcards. These particular exclusions are both DOCUMENTARY ARTIFACTS (H080).

F500
OTHER T&E FOR COMMUNICATION

Category 07
DISTRIBUTION & TRANSPORTATION ARTIFACTS

Artifacts originally created to transport or distribute animate and inanimate things. This category also includes artifacts originally created to facilitate such transportation or as an adjunct to such transportation. This category includes propelled vehicles such as automobiles and wheelbarrows as well as containers that facilitate distribution. Because transportation equipment is complex and parts are often collected independently, subclasses for accessories are offered for some classifications. Scaled and design models are featured in this category.

G020
CONTAINER

Artifacts originally created for packing, shipping, or holding goods and commodities. Containers created for particular products and used for marketing and merchandising products are listed in MERCHANDISING T&E (E400).

AEROSPACE TRANSPORTATION

G060: Aerospace Transportation Equipment

An artifact originally created to transport people or goods above the surface of the earth.

e.g., airplane, kite.

G080: Aerospace Transportation Accessory

An artifact originally created as an accessory to be used in conjunction with the transportation of people or goods above the surface of the earth.

e.g., engine, fixed-pitched propeller, propeller hub.

LAND TRANSPORTATION

G120: Land Transportation, Animal Powered

An artifact, powered by animal energy, originally created to transport people or goods on land without restriction to a fixed route determined by a track or other guidance device.

e.g., dogcart, cart, stagecoach.

G140: Land Transportation, Human Powered

An artifact, powered by human energy alone, originally created to transport people or goods on land without restriction to a fixed route determined by a track or other guidance device.

e.g., stretcher, bicycle, snowshoe.

G160: Land Transportation, Motorized

An artifact, powered by some kind of self-acting mechanism such as a motor, originally created to transport people or goods on land without restriction to a fixed route determined by a track or other guidance device.

e.g., automobile.

G180: LAND TRANSPORTATION ACCESSORY

An artifact originally created as an accessory used in the transportation of people or goods on land without restriction to a fixed route determined by a track or other guidance device.

e.g., hame, wheel chock, riding crop.

RAIL TRANSPORTATION

G220: RAIL TRANSPORTATION EQUIPMENT

An artifact originally created to transport people or goods on or along a fixed route determined by a track or some similar device.

e.g., train truck, locomotive.

G240: RAIL TRANSPORTATION ACCESSORY

An artifact originally created as an accessory to the transportation of people or goods on or along a fixed route determined by a track or some similar device.

e.g., switch iron, steam locomotive throttle.

WATER TRANSPORTATION

G280: WATER TRANSPORTATION EQUIPMENT

An artifact originally created to transport people or goods on or under water.

e.g., canoe, scow, lobster boat.

G300: WATER TRANSPORTATION ACCESSORY

An artifact originally created as an accessory for the transportation of people or goods on or under water.

e.g., life ring, rope capstan, paddle.

Category 08
COMMUNICATION ARTIFACTS

Artifacts originally created as expressions of human thought. COMMUNICATION ARTIFACTS comment on, interpret, or enhance people's environments. COMMUNICATION ARTIFACTS can function symbolically or literally. This category excludes the tools and equipment used to create communication artifacts.

H020
ADVERTISING MEDIUM

An artifact originally created to call public attention to a product, service, or event and to elicit a specific response in regard to products, services, or events. Generally the intended response is to urge people to acquire, use, or participate in the product, service, or event that is being advertised.

e.g., poster, banner, catalogue.

H040
ART

An artifact originally created for expressing and communicating ideas, values, or attitudes through images, symbols, and abstractions. It often reflects aesthetic pleasure or demonstrates creative skills and dexterity. Art can be uniquely created or it can be produced in a medium that allows many duplicates to be made.

e.g., picture, statue, gravure, painting.

H060
CEREMONIAL ARTIFACT

Artifacts originally created for carrying on governmental, fraternal, religious, or other organized and sanctioned societal activities. These artifacts are intended to evoke, symbolize, or express certain aspects of the traditions or heritage of a community or group of people. Usually they are associated with rituals or ceremonies. This classification includes: (1) any religious artifact, such as communication cups and altar pieces (note, though, that personal devotional objects such as religious medals and talismans are classified under PERSONAL SYMBOL [H120]); (2) any object used in a ceremony concerned with major personal events or crises, such as birth, puberty, sickness, or death, or concerned with community events or crises, such as harvest festivals or the need for rain; and (3) any object, such as a Girl Scout troop pennant, used in the ceremonial activities of a fraternity, lodge, club, governmental, or military organization.

H080
DOCUMENTARY ARTIFACT

An artifact originally created to communicate information to people. Unlike ADVERTISING MEDIUM

(H020), DOCUMENTARY ARTIFACTS are not generally intended to elicit specific responses in regards to products, services, or events. Instead, they present points of view, images, or sets of ideas, often with the aim of enlightening or swaying people's attitudes. This classification includes documents and also artifacts displaying commemorative information on materials other than paper, such as commemorative coins and souvenir plates.

H100
EXCHANGE MEDIUM

An artifact originally created to be used as a medium of exchange, such as coins, currency, or shell money, or as a means of obtaining specific services, such as postage stamps or transportation tokens.

H120
PERSONAL SYMBOL

An artifact originally created to communicate a particular personal belief, achievement, status, or membership. This classification includes articles of adornment or clothing worn primarily for their symbolism, such as fraternal rings, academic gowns, or crowns. PERSONAL SYMBOLS differ from CEREMONIAL ARTIFACTS (H060) in that they express individual ideas, not the ideas of a group.

Category 09
RECREATIONAL ARTIFACTS

Artifacts originally created to be used as toys or to carry on the activities of sports, games, gambling, or public entertainment.

I020
GAME

An artifact originally created for a competitive activity based upon chance, problem solving, or calculation rather than physical effort and conducted according to stated rules. This category also includes all forms of gambling devices.

e.g., dominoes, marble, card deck.

I040
PUBLIC ENTERTAINMENT DEVICE

An artifact originally created for the production of non-competitive spectator entertainment.

I060
RECREATIONAL DEVICE

An artifact originally created for a participatory, usually non-competitive, recreational activity other than an athletic game or exercise. This classification includes entertainment equipment such as a carousel, a pinball machine, a swing, or a slide, whether such equipment is publicly or privately owned and whether or not charges are associated with its use.

I080
SPORTS EQUIPMENT

An artifact originally created for a physical activity that is often competitive. This classification includes equipment used in all forms of athletic games and exercises, including individual and team sports.

e.g., dumbbell, tennis net, ice skate.

I100
TOY

An artifact originally created as a plaything. Toys often represent functional objects, such as toy hammers and toy ships, or living things, such as baby dolls and stuffed animals. Toys also include objects developed primarily for play, such as balls, tops, and kites.

Category 10
UNCLASSIFIABLE ARTIFACTS

Artifacts originally created to serve purposes that cannot be identified at the time the objects are catalogued.

J020
ARTIFACT REMNANT

A segment or incomplete part of an artifact originally created to fulfill a purpose that cannot be determined or inferred from the fragment.

J040
FUNCTION UNKNOWN

An artifact originally created to serve an unknown purpose.

J060
MULTIPLE USE ARTIFACT

An artifact originally created to serve a variety of purposes that extend beyond the range of one classification. Tools that have multiple attachments that enable them to serve a range of functions fall into this classification, as do hybrid tools that are made of several disparate parts that are used together to perform a particular function, such as fence mending.

III

THESAURUS

INTRODUCTION

Terms in the thesaurus are presented in two ways: in alphabetical order and in hierarchical order by category and class.

At the time of cataloguing, a primary consultation may be carried out by simply consulting the alphabetical list. If the term is not found there, the hierarchical list may then be used to locate the appropriate term by way of a series of filters.

HIERARCHICAL

LIST OF TERMS

Class A020: BUILDING

Total: 27

Object, suffix
BALUSTRADE
BEAM, TRUSS
BLOCKHOUSE, MODEL
BUILDING, MODEL OFFICE
